## EDUCATION

### University of California, Berkeley

*B.S. in Electrical Engineering and Computer Science, GPA: 3.8*

Expected Graduation: May 2026

*Berkeley, CA*

### MiraCosta College

*A.S. in Computer Science and Mathematics, GPA: 4.0*

May 2024

*Oceanside, CA*

## EXPERIENCE

### Adaptive Launch Solutions

*Software Engineer*

September 2023 – Present

*San Diego, CA*

- Developed Ivy, a multi-modal machine learning-powered platform for systems engineers that optimizes the systems engineering workflow, reducing the cost of systems engineering labor by 20%.
- Engineered a scalable backend using Python (FastAPI, SQLAlchemy, Pydantic) and PostgreSQL, an intuitive frontend built with Flutter, secure authentication with Keycloak, and deployment on AWS.
- Led client-facing demos and contributed to marketing and business development efforts.

### Rippling

*Machine Learning Engineer (Contract)*

August 2025 – December 2025

*San Francisco, CA*

- Co-led a team of six developers to create an AI-driven expense report evaluation workflow.
- Built and deployed an end-to-end LLM pipeline in Databricks to parse, embed, and interpret policy documents using LangChain orchestration and a custom semantic chunking algorithm.
- Automated expense-policy validation workflows, reducing manual review workload by approximately 60%.

## RESEARCH

### B.E.S.T. Lab, UC Berkeley — Prof. Alice Agogino

August 2025 - Present

- Collaborated with a multidisciplinary research team and Squishy Robotics to develop robust computer vision models for detecting and attributing methane gas leak sources in oil and gas infrastructure.
- Built a methane gas plume dataset by applying background subtraction, frame extraction, bounding box annotation, and image augmentation (rotation, noise injection, brightness shifts, blur) on the GasVid dataset.
- Fine-tuned and evaluated YOLOv8s for plume localization and leak source detection, achieving **mAP50: 0.995** and **mAP50-95: 0.985**, demonstrating near-real-time performance on test benchmarks.

### Berkeley Artificial Intelligence Research (BAIR) — Speech Group

May 2025 - August 2025

- Conducted comprehensive evaluations of LLMs on the PokerBench dataset to examine their reasoning and decision-making capabilities in the context of poker, a high-variance, imperfect-information game.
- Integrated a discounted CFR poker solver with the LLM pipeline to enhance the pipeline's overall performance.
- Developed a Rust algorithm that generates complete game trees for any poker variant and outputs them in a JSON format readable by LLMs.

## LEADERSHIP

### Generative AI at Berkeley

*President*

December 2025 – Present

*Berkeley, CA*

- Scaled and led the largest student organization in the U.S. focused on generative AI, overseeing strategy, operations, and cross-functional teams across engineering, research, and outreach.
- Built and maintained industry partnerships to source collaborative technical projects, speaker events, and recruitment initiatives with companies such as Google, Netflix, Rippling, Microsoft, and many more.
- Recruited, mentored, and managed a leadership team responsible for club marketing, project management, recruitment, and industry outreach.

## TECHNICAL SKILLS

**Programming Languages:** Python, Java, JavaScript/TypeScript, C/C++, SQL (Postgres), Dart/Flutter

**Frameworks & Libraries:** PyTorch, FastAPI, SQLAlchemy, Pydantic, Next.js, React.js, LangChain, Keycloak

**Systems & Platforms:** AWS, Docker, PostgreSQL, Databricks, RabbitMQ, HuggingFace
